

Aizaz Ahmed

AI/ML Enthusiast | MERN Stack Web Developer | Undergraduate Software Engineer

+923008925097 | aizazahmed098@gmail.com | Islamabad, Pakistan | [LinkedIn](#) | [Portfolio](#)

SUMMARY

A Software Engineering student at Bahria University Islamabad with hands-on experience in C++, MySQL, and UI/UX design. Skilled in OOP, Data Structures, and Operating Systems, with a passion for building efficient, user-friendly software solutions.

EXPERIENCE

Frontend Developer - Trust Nexus

Nov '25 — Feb '26
Islamabad, Pakistan

Contributed to designing user-friendly interfaces and improving user experience

- Supported the team in developing practical solutions for real-world business challenges
- Collaborated with team members to optimize workflows and project processes
- Strengthened technical, teamwork, and problem-solving skills while learning industry best practices

AI Intern - Software Productivity Strategists, Inc. (SPS)

Jul '25 — Sep '25
Islamabad, Pakistan

Worked as an AI Intern at SPS, contributing to machine learning and AI-based projects

- Assisted in data preprocessing and preparation for training machine learning models
- Supported the development of AI-driven solutions for automation and decision-making
- Collaborated with team members to improve model performance and workflow efficiency
- Gained practical experience in machine learning concepts, data handling, and AI applications

UI/UX Intern - EvoSoftTech

Jul '24 — Aug '24
Islamabad, Pakistan (Remote)

Worked as a UI/UX Intern at EvoSoftTech, contributing to user interface and experience design tasks

- Assisted in creating user-friendly designs, wireframes, and prototypes for digital products
- Supported the team in improving usability and visual design of web and mobile interfaces
- Collaborated with designers and developers to ensure smooth design implementation
- Strengthened skills in UI/UX principles, design tools, and user-centered design practices

EDUCATION

Bachelor of Software Engineering, Bahria University (GPA: 3.2)

Oct '23 — Present
ISLAMABAD

- Focus Areas:** Software Design, Algorithms, Full-Stack Development, AI/ML.
Interests: Front end Web development, UI/UX Designing, Flutter Development, Firebase Integration, APIs Integration, AI Integrations, Blockchain Development. Eager to contribute to innovative, real-world software solutions with a passion for clean architecture and scalable systems.

Intermediate , Pre-Engineering, Bahria College Karsaz

Jul '21 — Jul '23
ISLAMABAD

- Major Field:** Physics, Chemistry and Maths.

PROJECTS

University Management System

- The University Management System is a Java Swing application with MySQL integration, supporting Admin, Teacher, and Student roles. Key features include login/signup, attendance, timetables, assignments, course and fee management, and AI-powered support via Gemini API.

TaskManager Full Stack Web Application

- Developed a full-stack web application using the MERN Stack (MongoDB, Express.js, React.js, Node.js).

WonderLand ToyStore FullStack E-commerce Web Application

- Wonderland ToyStore is a full-stack e-commerce web app for online toy shopping. It features category-based inventory, dynamic product attributes, secure cart and order handling, and a modern UI. Built with React, Flask, and MySQL, it includes AI recommendations, loyalty rewards, alerts, and promo management.

PakWheels Website Clone Project

- The PakWheels clone is a web platform that replicates the core features of the original site, allowing users to buy, sell, and discuss vehicles. It offers a user-friendly interface, smooth navigation, and essential functionalities tailored for automotive enthusiasts.

SCRUM Project on JIRA (RideShare Application)

- All requirement and design specifications for the university-focused RideShare App were addressed, with user stories and epics created for key features like ride booking, request acceptance, real-time tracking, and driver feedback.

E-commerce App UI/UX Design

- During my internship, I designed an intuitive and user-friendly UI/UX for an e-commerce app. The project focused on seamless navigation, clear interactions, and modern aesthetics through comprehensive prototyping, enhancing the overall shopping experience.

Console Based RPG Game

- Experience an immersive console-based RPG adventure built in C++, featuring a rich storyline, mysterious realms, and challenging foes within a thoughtfully designed game world.

SKILLS

Programming Languages:	HTML + HTML5, CSS, JavaScript, Java, SQL, Dart, Python
Frameworks/Libraries:	Bootstrap, TalwindCss, Java Swing, ReactJS
Database:	MYSQL, Firebase, MongoDB, Supabase
Core Concepts:	Object Oriented Programming, Data Structures and Algorithms, Discrete Structure, Operating System, Intro to AI/ML
Tools:	Git, GitHub, JIRA, Figma, MS Office, Docker
Soft Skills:	Problem Solving, Teamwork, Quick Learning, Communication Skills, Analytical Thinking, Leadership
Deployment	Vercel, Netlify, Railway
Languages	English , Urdu, Pashto, Basic German, Basic Italian
